

TITLE OF THE INVENTION

EP<sub>4</sub> RECEPTOR AGONIST, COMPOSITIONS AND METHODS THEREOF

ABSTRACT OF THE INVENTION

This invention relates to potent selective agonists of the EP<sub>4</sub> subtype of prostaglandin E<sub>2</sub> receptors, their use or a formulation thereof in the treatment of glaucoma and other conditions which are related to elevated intraocular pressure in the eye of a patient. This invention further relates to the use of the compounds of this invention for mediating the bone modeling and remodeling processes of the osteoblasts and osteoclasts.
